APPLIED NUMERICAL MATHEMATICS

Author Index—Volume 14 (1994)

(The issue number is given in front of the page numbers)

Ahués, M. and **K. Attoh**, A refinement method for maximal deflating bases of regular pencils (4) 367–382
Ainsworth, M., J.T. Oden and **W. Wu**, *A posteriori* error estimation for *h-p* approximations in elastostatics (1–3) 23– 54
Attoh, K., see **Ahués, M.** (4) 367–382

Babuška, I., I. Lee and **C. Schwab**, On the a posteriori estimation of the modeling error for the heat conduction in a plate and its use for adaptive hierarchical modeling (1–3) 5– 21
Belytschko, T. and **T.D. Blacker**, Enhanced derivative recovery through least square residual penalty (1–3) 55– 68
Berger, M.J. and **J.S. Saltzman**, AMR on the CM-2 (1–3) 239–253
Biswas, R., K.D. Devine and **J.E. Flaherty**, Parallel, adaptive finite element methods for conservation laws (1–3) 255–283
Blacker, T.D., see **Belytschko, T.** (1–3) 55– 68
Burton, W.S., see **Noor, A.K.** (1–3) 69– 90

Carpenter, M.H., see **Kennedy, C.A.** (4) 397–433
Clark, K., J.E. Flaherty and **M.S. Shephard**, Introduction (1–3) 1– 3

Devine, K.D., see **Biswas, R.** (1–3) 255–283
Dougherty, R.L. and **J.M. Hyman**, A divide-and-conquer algorithm for grid generation (1–3) 125–134

Eidelman, S., see **Lottati, I.** (1–3) 353–365
Evans, G.A., Two robust methods for irregular oscillatory integrals over a finite range (4) 383–395
Ewing, R.E. and **R.D. Lazarov**, Approximation of parabolic problems on grids locally refined in time and space (1–3) 199–211

Fish, J., S. Markolefas, R. Guttal and **P. Nayak**, On adaptive multilevel superposition of finite element meshes for linear elastostatics (1–3) 135–164
Flaherty, J.E., see **Biswas, R.** (1–3) 255–283
Flaherty, J.E., see **Clark, K.** (1–3) 1– 3

Grove, J.W., Applications of front tracking to the simulation of shock refractions and unstable mixing (1–3) 213–237
Guttal, R., see **Fish, J.** (1–3) 135–164

Hyman, J.M., see **Dougherty, R.L.** (1–3) 125–134

Johnson, C.R. and **R.S. MacLeod**, Nonuniform spatial mesh adaptation using a posteriori error estimates: applications to forward and inverse problems (1–3) 311–326

Kennedy, C.A. and **M.H. Carpenter**, Several new numerical methods for compressible shear-layer simulations (4) 397–433
Kim, S., A parallelizable iterative procedure for the Helmholtz problem (4) 435–449
Kozlovsky, G., Solving partial differential equations using recursive grids (1–3) 165–181

Lazarov, R.D., see **Ewing, R.E.** (1–3) 199–211
Lee, I., see **Babuška, I.** (1–3) 5– 21
Lottati, I. and **S. Eidelman**, A second-order Godunov scheme on a spatial adapted triangular grid (1–3) 353–365

MacLeod, R.S., see **Johnson, C.R.** (1–3) 311–326
Markolefas, S., see **Fish, J.** (1–3) 135–164
McCormick, S. and **U. Rüde**, A finite volume convergence theory for the fast adaptive composite grid methods (1–3) 91–103

Nayak, P., see **Fish, J.** (1–3) 135–164
Noor, A.K., W.S. Burton and **J.M. Peters**, Hierarchical adaptive modeling of structural sandwiches and multilayered composite panels (1–3) 69– 90

Oden, J.T., see **Ainsworth, M.** (1–3) 23– 54

Peters, J.M., see **Noor, A.K.** (1–3) 69– 90
Powell, K.G., A tree-based adaptive scheme for solution of the equations of gas dynamics and magnetohydrodynamics (1–3) 327–352

Elsevier Science B.V.

Ramakrishnan, R., Structured and unstructured grid adaptation schemes for numerical modeling of field problems (1–3) 285–310
Rüde, U., see **McCormick, S.** (1–3) 91–103

Saltzman, J.S., see **Berger, M.J.** (1–3) 239–253
Schwab, C., see **Babuška, I.** (1–3) 5– 21
Shephard, M.S. and **R. Wentorf**, Toward the implementation of automated analysis idealization control (1–3) 105–124
Shephard, M.S., see **Clark, K.** (1–3) 1– 3
Simkani, M., Local limiting behavior of the zeros of approximating polynomials (4) 451–456
Simpson, R.B., Anisotropic mesh transformations and optimal error control (1–3) 183–198

Wentorf, R., see **Shephard, M.S.** (1–3) 105–124
